

How to make a translation of a form.

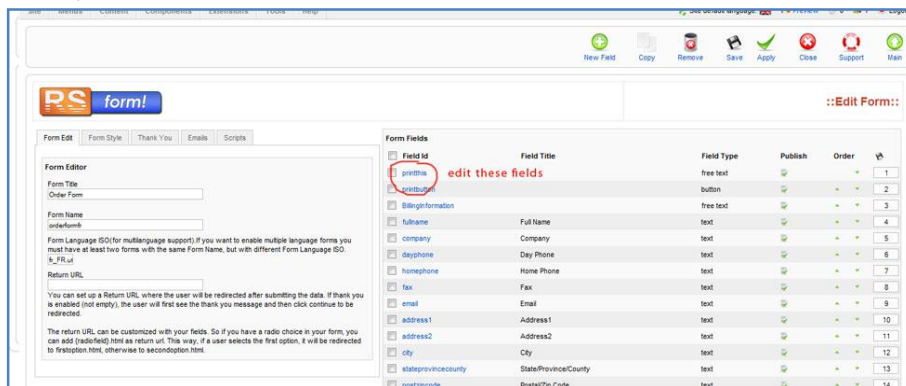

To make a translation of a form, don't use Joomfish, but go to: Components, RS Form, Forms Manager to edit the form itself.

Create a copy of the English version (in this case Form ID 2) by clicking on the Copy button at the top right. In the example below, the copy is the one labelled 'french version' (form ID4).

Then click on the form name (circled in red) to edit it.

Then you need to edit the Form Fields. Click on the fields to edit them.

Edit just the bits you need. Don't forget to SAVE (top right button on the edit field page)
